
Part 2: Evaluating the Opportunity: Learning Conditions, Complexity, Objectives

Instructions:

1. Group Discussion and Evaluation (15-20 minutes)

Discuss and evaluate your chosen opportunity based on the following dimensions:

1. Learning Conditions:

- How accessible and reliable is the data required to pursue this opportunity?
- Is the data readily available, or is it fragmented and incomplete?
- Can you experiment, and how costly are mistakes?

2. Complexity of Implementation:

- How many decisions are involved in pursuing this opportunity?
- How challenging would implementation be, considering technical, cultural, and organizational hurdles?

3. Clarity of Objectives:

- How clear and measurable are the objectives?
- Are there any regulatory or ethical concerns to consider?

Using LLMs in Part 2:

- LLMs are powerful tools for brainstorming and refining ideas, but they lack access to your specific organizational context. This includes:
 - Your organization's data quality, systems, and workflows.
 - Internal cultural or technical constraints.
 - Strategic priorities or regulatory considerations.
- To overcome this limitation:
 - Provide your preliminary assessment of learning conditions, complexity, and clarity, and ask the LLM to refine or validate it.
 - *Example Prompt:* "I think implementing predictive analytics for demand forecasting in my company would face high complexity due to fragmented data. How might I simplify the implementation process?"

2. Mapping the Opportunity to the 2x2 Matrix (Slide 28)

1. Place the chosen opportunity on the 2x2 matrix:

- **X-Axis: Complexity of Implementation (Low to High)**
- **Y-Axis: Learning Conditions (Easy to Challenging)**

2. Prepare to Share (2 minutes): Be ready to share the following with the main room:

- **Placement on the Matrix: Where did your opportunity land?**
 - **Justification: Why did it land there? Highlight key challenges and opportunities.**
 - **Action Step: Identify one action step your organization could take to begin pursuing this opportunity.**
-

Outcome of the Exercise

By the end of this exercise, participants will:

- **Assess their organization's readiness for data science and analytics.**
 - **Generate and critically evaluate actionable data science opportunities.**
 - **Understand the importance of data, complexity, and clarity when prioritizing initiatives.**
 - **Experience the value of generative AI in brainstorming and refining ideas.**
-

Materials Needed

- **Access to an LLM tool (e.g., ChatGPT, Claude, or other tools).**
 - **Slide 28: The 2x2 matrix visual.**
 - **Flipcharts, whiteboards, or sticky notes for group work.**
-

Facilitator Notes:

- **Monitor group discussions to ensure they address all dimensions (learning conditions, complexity, and clarity).**
 - **Encourage participants to be specific and actionable in their evaluations.**
 - **Offer support to those less familiar with LLM tools by demonstrating an example prompt in the main room.**
-

End of Exercise
