SHORT BIO

I am a Professor of Management Science and Operations at London Business School and Academic Director of the Data Science and AI Initiative. My research examines data science and AI and how they are reshaping business, including healthcare delivery. My training in physics, finance and management science at the University of Cambridge informs how I approach these questions.

My work has appeared in *Management Science*, *Manufacturing & Service Operations Management*, *Production and Operations Management* and other journals. I am a Department Editor at *Management Science* and have served as Associate Editor at *Management Science*, *M&SOM* and *POM*.

I teach statistics, data science, machine learning, generative AI and healthcare management. For executives, I co-teach a custom in-person Generative AI Masterclass with Keyvan Vakili, and have created two online courses: *Business Analytics in the Age of Generative AI* and *Generative AI for Leaders*. The focus throughout is on where these technologies create value, where they don't, and how to tell the difference.
